# VANPRASETH TUY

**Computer Science | Cybersecurity**

0424148849 | Melbourne, VIC | vanprasethtuy@gmail.com | LinkedIn | GitHub

## SUMMARY

Computer Science graduate majoring in Cyber Security, with practical experience in full-stack development, Python simulations and computer vision. Built and tested applications using Laravel, React, Python, SQL and Docker. Seeking a graduate software developer or junior full-stack developer role.

## TECHNICAL SKILLS

**Languages:** Python, C#, TypeScript, JavaScript, PHP, SQL, HTML, CSS, Bash

**Frameworks and Libraries:** Laravel, React, FastAPI, Flask, Pandas, NumPy, OpenCV, Plotly, Tailwind CSS

**APIs:** REST API development and integration

**Tools and Platforms:** Docker, Git, GitHub, Bitbucket, CI/CD workflows, Jira, Kali Linux

**Databases:** MySQL, SQLite, database design, entity relationship diagrams (ERDs)

**Cybersecurity and Networking:** Wireshark, Nmap, IDA Freeware, Process Monitor, TCP/IP, network troubleshooting, access control, network configuration

## EDUCATION

**Bachelor of Computer Science (Cyber Security)**

Swinburne University of Technology | Melbourne, VIC | February 2024 – October 2026

**Foundation of Science and Engineering**

Swinburne University of Technology | Melbourne, VIC | February 2023 – October 2023

## WORK EXPERIENCE

**Full-Stack Developer Intern**

**Superbolt Pty Ltd | Melbourne, VIC | June 2026 – Present**

- Developed and tested responsive web applications using Laravel, React, TypeScript, Tailwind CSS and MySQL to meet business requirements.
- Configured Docker environments and resolved application, migration and seeding issues to help the team run and test features consistently.
- Tracked tasks in Jira and managed branches and pull requests through Git and Bitbucket to support code reviews and team integration.
- Used AI tools to assist development and debugging, checking generated code for correctness and maintainability.

**Software Developer Intern**

**Shaping STEM Futures | Melbourne, VIC | August 2026 – November 2026**

- Developed and tested a Python simulation to predict biogas production from food waste.
- Implemented pretreatment scenarios using literature-based inputs and stakeholder requirements.
- Reviewed model outputs and investigated differences in methane yield and process stability.
- Created data visualisations and collaborated using GitHub branches, testing and code reviews.

**Software Developer (Capstone Project)**

**Swinburne University of Technology | Melbourne, VIC | February 2026 – October 2026**

- Developed a real-time computer vision interface using Python, OpenCV and NumPy.
- Built health-monitoring and presentation dashboards for optical-flow and divergence analysis.
- Translated complex vision data into clear proximity, tilt and system-health indicators.
- Integrated features into an existing codebase using Git and GitHub.

## *PROJECTS*

**SpamChecker | Machine Learning Spam Detection Web Application**

- Built a full-stack application to classify messages as spam or safe, with single-message and batch analysis.
- Trained Logistic Regression and Random Forest models on 123,000+ labelled messages, achieving approximately 97.3% and 98.6% accuracy respectively.
- Added risk summaries, interactive charts and export functionality.

**Technologies:** Python, FastAPI, React, Scikit-learn, TF-IDF, Pandas, Plotly

**BookShop | Full-Stack E-Commerce Web Application**

- Built a responsive bookstore with search, shopping carts, checkout, order history and shipment tracking.
- Structured a layered Flask backend with SQLite, password hashing, token-based authentication and role-based access.
- Developed an admin dashboard for books, inventory, shipments, sales reports and low-stock monitoring.

**Technologies:** Python, Flask, SQLite, JavaScript, HTML, CSS, REST API

## *CERTIFICATES*

**Introduction to Cybersecurity** — Cisco Networking Academy | 2026

**Introduction to Networks** — Cisco Networking Academy | 2024

**Switching, Routing and Wireless Essentials** — Cisco Networking Academy | 2024
